Methods of Suicide

[NIH](2018)

Suicide by Method (2018) Data Courtesy of CDC		↓
Suicide Method	Number of Deaths	
Total	48,344	
Firearm	24,432	
Suffocation	13,840	
Poisoning	6,237	
Other	3,835	

Percent of Suicide Deaths by Method

- Figure 5 shows the percentages of suicide deaths by method among males and females in 2018. Among males, the most common methods of suicide were firearm (55.9%) followed by suffocation (28.3%). Among females, the most common methods of suicide were firearm (31.5%), suffocation (29.9%), and poisoning (29.3%).

Defensive Gun Uses (SSRN)[2021]

The survey further finds that approximately a third of gun owners (31.1%) have used a firearm to defend themselves or their property, often on more than one occasion, and it estimates that guns are used defensively by firearms owners in approximately 1.67 million incidents per year.

https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3887145

Gun violence was on a downward trajectory before the 1994 ban(PEW)

Between 1993 and 2000, the gun homicide rate dropped by nearly half, from 7.0 homicides to 3.8 homicides per 100,000 people. Since then, the gun homicide rate has remained relatively flat. From 2009 to 2014, the most recent year data are available, the number of gun homicides has hovered around 11,000 and 12,000 per year.

By contrast, a significantly higher – and growing – number of gun deaths were by suicide than by homicide, and this has been true throughout the past two decades. For example, while the gun suicide rate has declined overall since 1993, in recent years it has risen, from 6.3 per 100,000 people in 2010 to 6.7 in 2014.
